Apps Meet: vcp-jvyy-dtu Empreendedorismo...

This page contains download links for the latest released version of PuTTY. Currently this is 0.76, released on 2021-07-17.

When new releases come out, this page will update to contain the latest, so this is a good page to bookmark or link to. Alternatively, here is a [permanent link](#).

Release versions of PuTTY are versions we think are reasonably likely to be stable, so if you are unsure whether to try a new version, then it might be worth trying out the [development snapshots](#), to see if they are better.

Package files

You probably want one of these. They include versions of all the components (Not sure whether you want the 32-bit or the 64-bit version).

Unix source archive

.tar.gz: [putty-0.76.tar.gz](#)

Alternative binary files

The installer packages above will provide versions of all of these (except PuTTYtel), but you can download standalone binaries one by one if you prefer.
